

Week 5 · Studio — Score Real Work, Many Ways

TCE 318P FA26 (Edwards)

In class · assessment studio. The task and four real (anonymous) grade-4 responses. Your table's rubric comes on its own sheet.

The task

An amusement park has games, rides, and shows. The total number of games, rides, and shows is 70. There are 34 rides. There are two times as many games as shows.

How many games are there? _____ How many shows are there? _____

Use numbers, words, or drawings to show how you got your answer.

The work samples

Four real, anonymous grade-4 responses. First score one sample cold — no rubric, just your gut. Then score all four with your table's rubric, and note the reason each earned its score. We pool every table's scores in the debrief.

Student Work Sample	Scoring
How many games are there? <u>24</u> How many shows are there? <u>12</u> 6¹⁰ 8 -34 36 12 36 12 2 24	
How many games are there? <u>12</u> How many shows are there? <u>24</u> You do 70-34=36. The game estimate what number and 2 times as much as the number plus 34 equals 70. So I got 12+24+34=70.	

How many games are there? <u>24</u> How many shows are there? <u>12</u> <i>70-34=36 so 36 ÷ 3 = 12 that's the number of shows there are then you subtract 6</i>	
How many games are there? <u>24</u> How many shows are there? <u>12</u>
